

PRESS RELEASE

ATEQ AVIATION AND CCX TECHNOLOGIES AGREE TO UNIQUE TEST SET SOFTWARE

Publication: for immediate release

(Les Clayes-sous-Bois – France, September 2024) – ATEQ Aviation and CCX Technologies are pleased to announce a new strategic partnership to deliver unprecedented testing efficiency and accuracy to current and future customers of the T-RX Avionics Tester and ADSE 650 Air Data Test Set.

A first in the industry, the T-RX seamlessly transmits curated avionics data over Wi-Fi to the ADSE for air data testing – replacing manual data entry with auto-population of required avionics information. Avionics data will also be visible directly from the ADSE 650 tablet, reducing the amount of equipment that a technician needs to work with.

“This partnership further streamlines testing, minimizes effort, and enhances test accuracy for our shared customers,” says Chris Bartlett, President and Co-Founder of CCX Technologies. “As industry leaders committed to customer-centric innovation, we are excited to collaborate with ATEQ Aviation, a pioneering force in the Air Data Test market. This alliance underscores our ongoing dedication to driving industry excellence and prioritizing our customers.”

“We’re excited to announce the launch of this new integration,” says Gabriel Nativel, Aviation Global Manager at ATEQ Aviation. “This advancement will significantly benefit aircraft maintainers by automating time-consuming maintenance tasks, allowing shops to dramatically increase their capacity, efficiency, and productivity.”

The T-RX is CCX Technologies’ all-in-one radio and pulse test tablet. With the largest sunlight-readable touchscreen display, integrated antennas, fast boot time, simple menu structure, and PDF test report generation, the T-RX is the leading choice for aircraft OEMs, MROs, and aircraft AOG teams in the industry today.

ATEQ Aviation’s ADSE 650 Air Data Test System is an industry-leading tool for efficient air data and pitot static testing. The test set is housed in a rugged, portable case for easy manoeuvrability, and testing can be conducted remotely from a provided 8-inch colour touchscreen tablet.

Combining the capabilities of both technologies, this collaboration will empower aircraft technicians and engineers to perform more efficient, reliable testing tasks and to better streamline their workflow to comply with official safety testing procedures.

As part of this partnership, CCX Technologies and ATEQ Aviation have also agreed to become mutual resellers of the ADSE 650 and T-RX, respectively, offering customers a one-stop shopping experience while receiving unprecedented avionics testing and Air data test support, service, and calibrations.

CCX Technologies will formally unveil this integration at the **NBAA BACE Conference in Las Vegas, NV. To participate in this launch, visit Booth #948 on October 22 at 10:00 am PST.**

ATEQ Aviation will simultaneously present this new combined solution T-RX coupled with ATEQ ADSE 650 for the first time at **MRO Europe in Barcelona on October 23-24, 2024. Visit ATEQ Aviation booth #9083 to test this new solution.**

CCX Technologies

Headquartered in Canada, CCX Technologies develops cutting-edge hardware and software solutions for aircraft operators, OEMs, and maintainers. This includes a suite of secure networking tools that optimize the performance of onboard connectivity, while simultaneously protecting the network with multiple layers of complex security. CCX Technologies is also the developer of the T-RX – an industry-leading, all-in-one avionics test set that conducts over 100 tests, across 17 systems, providing unmatched testing accuracy and efficiency to the industry. Leveraging a team of highly skilled engineering professionals, CCX Technologies is committed to innovating complex systems that enhance the efficiency, performance, and security of various operations in the aerospace and defence sector. CCX Technologies is also Transport Canada certified, and compliant with CMMC 2.0 Level 1 regulations. www.ccxtechnologies.com

ATEQ Aviation

ATEQ Aviation is a worldwide manufacturer of automated testers for all types of aircrafts. In order to assist aviation manufacturing and maintenance, ATEQ has developed a complete range of products and customized hardware and software solutions, adapted to all industry requirements: pneumatic, electric and electronic safety testing systems. From design to production, ATEQ Aviation.

More than 20 engineers work all year long to improve the measurement quality of ATEQ's systems and create the best Aviation test tools in the industry.

ATEQ Aviation is a division of ATEQ Group the number one supplier of automatic leak testing machines and leak test systems for assembly lines and laboratories. With more than 46 years of experience and thanks to its presence in 40 countries, ATEQ is servicing more than 5 000 customers worldwide and has a net revenue of 170 M€.
